

Make AI useful at work.

THE WORK

A business process worth fixing.

We identify expensive, repetitive work, redesign the process, build AI-powered systems and measure the improvement. We work from business input to automated checks, exception review and a usable outcome.

WHAT WE SOLVE

— Finance operations

Invoice review, reconciliation, supplier checks, audit and approvals.

— Commercial operations

Enquiry consolidation, qualification, ownership and follow-up.

— Product and service operations

Manual handoffs, fragmented software, unstructured information and repetitive documentation.

WHAT WE BUILD

Process redesign / custom software / AI-assisted applications / deterministic automation / integrations / deployment / audit and controls / ongoing optimisation.

TRY THREE COMPLETE WORKFLOWS

01 ACCOUNTS PAYABLE

Open interactive demo ↗

02 SALES OPERATIONS

Open interactive demo ↗

03 HANNA CLINICAL DEMO

Open interactive demo ↗

All three demos use synthetic data and deterministic rules. No live AI, real clients or clinical validation.

From a first call to a working release.

FOUNDER-LED DELIVERY

Work directly with the people responsible for the solution architecture, interface, engineering, implementation and handover. We scope the first useful milestone before committing to a full build.

VERIFIABLE ENGINEERING EVIDENCE

HANNA / OWN PRODUCT IN DEVELOPMENT

Clinical consultation flow, structured note, medication review, multilingual patient documents and printable care-plan components. This is development evidence, not a claim of hospital deployment or clinical validation.

ARCHANGEL / LIVE DIGITAL PLATFORM

The public website demonstrates responsive interface engineering and deployed web application work. The finance and sales demos illustrate proposed operational architecture, not customer case studies.

HOW WE ENGAGE

01 Free 15-minute discovery call

Select one operational problem, owner and useful first milestone.

02 Three-hour transformation workshop / THB 45,000

Map inputs, decisions, exceptions, integration requirements and scope.

03 Implementation / individually scoped

Design, engineer, test, deploy and hand over the agreed system.

04 Support and optimisation / individually scoped

Agree operational support, monitoring and improvement measures.

WHAT CLIENTS RECEIVE

A documented workflow and scoped proposal; tested software and agreed acceptance criteria; deployment, handover, and operating documentation.

START WITH ONE PROCESS.

Book the free 15-minute fit call or send us the workflow you want to improve.
